**Surveillance is an art. It takes years to master.**

### **A surveillance field agent has to learn:**

Videoing, following, blending in, claimant identification, locating the right address, what vehicle does the claimant drive, what hours to work, writing a proper report, giving his deposition?

### **Ask yourself:**

Is the claimant a day, afternoon, or evening type person, do we work weekends, weekdays, or a mixture of both.

### **What training does the field agent receive from his employer?**

Is there an experienced surveillance expert on standby for the pi to call on 24-hours a day? What hours do we work? 6 am to 2 pm, 3 pm to 11 pm, 10 pm to 6 am? Do we work as a one man or a two-man team? Do you work 8-, 10-, or 12-hour shifts?

### **Surveillance is different if the case is in the city or on a rural part of the county.**

We work at least 24-hours of surveillance time on a case. We need to answer all the questions above. Below is an example of a one-day 10-hour case.

The pi just worked from **6 am to 4 pm**. The claimant **remained home** during these 10 surveillance hours.

The claimant **goes out dancing at 7 pm** on his alleged bad left leg? **No video is obtained** because the pi departed at 4 pm.

## **Surveillance is the art of waiting. Wait long enough and the claimant will be active.**

**With our video or free plan**, the risk is ours. We have to figure out if the claimant is a day, afternoon, or an evening type person. Just give Need Surveillance a good claimant address, that is all we require. If it takes our field agents 6 days to obtain video, the cost is still only \$2,900 for a 24-hour block of surveillance time.
